Practical Manual of Instrumentation

By

GASTON BORCH

Cloth, net $1.00

THIS book fills a long-felt need for a short, comprehensive guide for the use of both professional and amateur musicians. Not enough emphasis can be laid upon the fact that the work is truly a practical manual and reference book. The student, eager to obtain information regarding instrumentation, as well as the trained and experienced musician desirous of ready confirmation, will find this book an ideal source of instruction. Its plan of combining the minimum amount of verbal explanations with the maximum amount of musical charts and examples is a noteworthy distinction from the cumbersome volumes on orchestration that abound in unessential material. The orchestra leader will find especially profitable information in the chapters devoted to the reducing of large scores for the concert orchestra, to the reducing of scores for still smaller combinations, and to "cross cueing." The value of the conductor's ability to arrange scores that may meet effectively the requirements of his particular combination of instruments, cannot be over-estimated.

PROF. PERCY GOETSCHIUS says: "I have gone through Mr. Borch's 'Manual of Instrumentation' repeatedly and with extreme thoroughness. It is a truly valuable work and certain to be of use to the student. I think it is excellent, and there can be no question of its desirability. I am delighted at having so useful a manual for my orchestration classes."
